Solutions for Digital Signage

## **Multi-Screen-Displays Artista Display Printer (ADP)**

**Managing image content for Artista TFT controllers is now easier than ever. Content can now be sent from any Windows application (e.g. Word, Powerpoint, Photoshop, etc.) directly to one or more Artista-driven displays using the new “Print” feature. No additional imaging software is required**

For Windows Vista and Windows XP

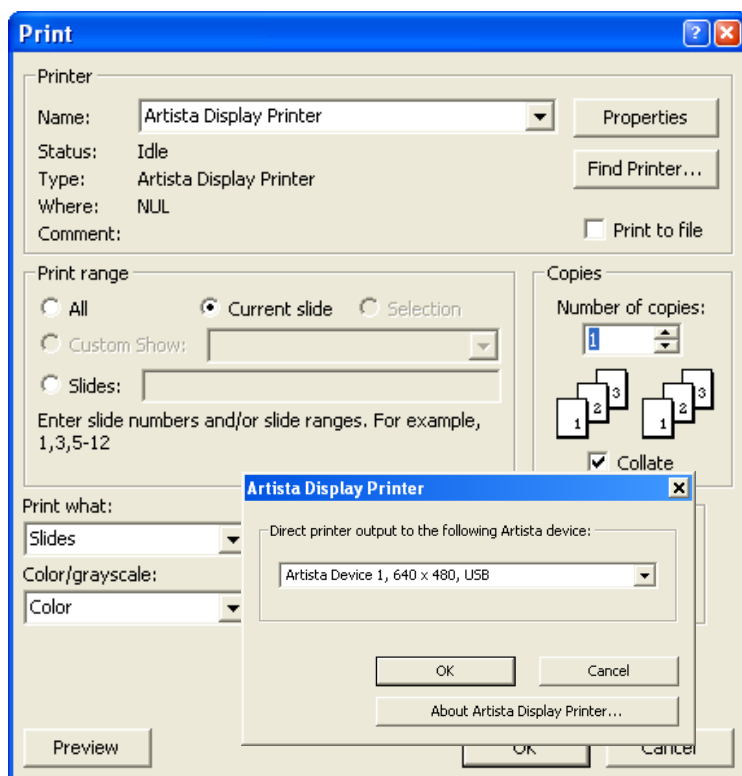

**DATA DISPLAY**

*flatpanel displays and solutions*

The new ADP makes generating image content for Artista TFT controllers as easy as printing on paper. Content can now be "printed" directly to an Artista from within your favourite Windows application.

Do you use Word, PowerPoint, Photoshop or a similar application to create content for your digital signage?

Creating digital ads, electronic billboards, welcome panels, electronic information displays or digital door signs has never been easier. Simply use the Print command in your Windows application to "print" the current page of your document to any Artista connected to the system.

Easy installation:

- The ADP installs into Windows Vista or Windows XP just like any normal printer.

Easy to use:

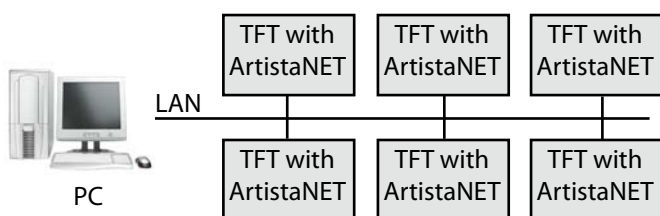

- Create your image content using your favourite Windows application such as PowerPoint.
- In the "Print" dialog, select Artista Display Printer as your printer.
- Select the specific screen where you'd like the content to be displayed.
- The "printed" image is displayed within seconds.

No additional imaging software is required.

For **ArtistaNET** and **ArtistaUSB** TFT-controller with display resolutions from VGA to WXGA and SXGA.

The ADP can be used on systems configured with multiple displays featuring screens of various sizes and resolutions.

### Sample configuration

For example user-defined number of displays for digital door signs, welcome-panels and digital ads in various sizes and resolutions from 5" to 46" each with Artista TFT-controller for LAN and one Office-PC with Windows XP

### Artista TFT-Controller for Ethernet

For TFT-displays with a size from 5" to 46" and a resolution from QVGA (320x340) to WXGA (1366x728) and SXGA (1280x1024)

No client PC required. Quick and easy installation, no client-server software architecture, no administration, no maintenance, power saving.
